**Service**

**Maintenance**

We do not simply install; we engineer, build and bring new ways to solve the challenges of today, by saving time, money and driving continuous improvement on any capital delivery, upgrade or maintenance programme.

A holistic business system can safeguard your enterprise and ensure the safety and security of your property, assets, and personnel. From wireless access and biometric control, facility and carpark management, intruder detection systems, video surveillance systems right through to visitor management, and more, we develop and deliver tailored solutions to meet your individual, end to end business needs.

Secure your Environment. Secure your Future.

### Structured Cabling

Structured cabling is essential to any IT network and improves network performance, reduces connectivity downtime and simplifies management.

### ANPR Solutions

Automatic Number Plate Recognition enables cameras to read vehicle number plates by using high-speed image capture technology.

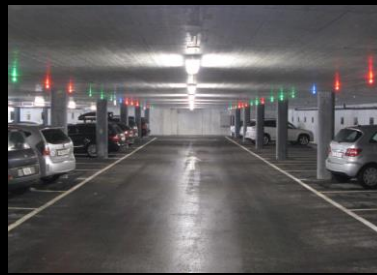

### Facial Recognition

A security technology used to verify personal identities by pinpointing and measuring facial features from a digital image or a video frame.

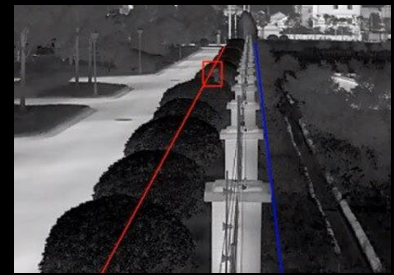

### Visitor Management

A digital management system which efficiently manages visitors, staff and contractors and others needing to sign in across one or multiple locations.

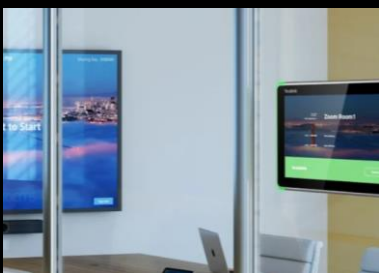

### Parking Management

Improves current flow and available space and manages car park occupancy, traffic congestion and vehicle access control, and enhances safety.

### Video Analytics

Automatically analyses content from surveillance cameras by identifying various types of events and provides valuable insights for business intelligence.

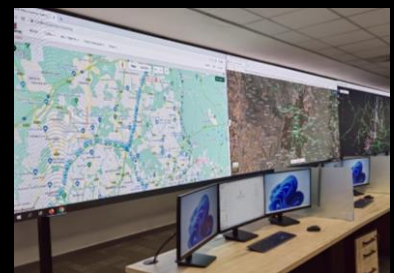

### Workplace Mngt.

Manages facility booking, schedules, end-to-end building operations, and maintenance to ensure the functionality and efficiency of workplaces.

### Audio Visual

AV integrates sound and visual components in various forms of media and communication, to enhance collaboration, training and productivity.

### Control Rooms

Serves as a central control and monitoring station for security, safety, building and other technological infrastructure, for operational continuity.
